## Personal statement

A self-taught web developer with two years of working experience, although I've been playing around with computers and programming since I was fourteen. I love to solve programming problems and getting my head around them, thinking through the possible solutions and applying them is always exciting. Apart from the technical side, designing a polished, good-looking web app without forgetting about the user experience is another priority for me at building these.

## Core skills

- Proficient in **PHP**, **CSS**, and **JavaScript**.
- Working knowledge in **Laravel**, **SCSS**, **Vue**, **Node**, **Redis**, **Socket.io**, and **PWAs**.
- Experience with design patterns, frameworks, and architecture.
- Working knowledge of **SQL**. Very familiar with relational databases.
- Experience with **object-oriented** software development methodologies.
- **Communicative**, happy to learn new things and implement them.
- Proficient using **git** as a version control system.

## Employment history

**Full stack web developer - Universo Parkour ([universoparkour.org](http://universoparkour.org))**  
*(September 2016 - January 2018)*

Only developer and designer at the project. This web application was built using Laravel 5.5, it uses SCSS as a CSS preprocessor and ES6 that is compiled through babel and bundled using Laravel Mix (Webpack). A test-driven development (PHPUnit) approach was used and AWS S3 for hosting resources and deliver them fast.

## Education

- Bachelor of Science and Technology
- The first year completed in Development of Web Applications - Certificate of Higher Education
- Cambridge certification of C1 English Level
